Last KeyFirst Answer

<p><b>Question 1</b> 6 Points</p>	<p>a) Write a <b>net ionic equation</b> to show <b>HF</b>, behaves as an acid in water.  <math display="block">\text{HF}(\text{aq}) + \text{H}_2\text{O}(\text{l}) \rightleftharpoons \text{H}_3\text{O}^+ + \text{F}^-</math>           (= or ⇌)</p> <p>b) Write a <b>net ionic equation</b> to show how <b>ammonia</b> behaves as a base in water.  <math display="block">\text{NH}_3(\text{aq}) + \text{H}_2\text{O}(\text{l}) \rightleftharpoons \text{NH}_4^+ + \text{OH}^-</math>           (= or ⇌)</p>												
<p><b>Question 2</b> 8 Points</p>	<p>Assign each species on the <b>left</b> to a <b>category</b> on the <b>right</b>.</p> <table border="0"> <tr> <td>a) HI</td> <td><u>1</u></td> <td>1. Strong Acid</td> </tr> <tr> <td>b) LiOH</td> <td><u>3</u></td> <td>2. Weak Acid</td> </tr> <tr> <td>c) (CH<sub>3</sub>)<sub>2</sub>NH</td> <td><u>4</u></td> <td>3. Strong Base</td> </tr> <tr> <td>d) HCN</td> <td><u>2</u></td> <td>4. Weak Base</td> </tr> </table>	a) HI	<u>1</u>	1. Strong Acid	b) LiOH	<u>3</u>	2. Weak Acid	c) (CH <sub>3</sub> ) <sub>2</sub> NH	<u>4</u>	3. Strong Base	d) HCN	<u>2</u>	4. Weak Base
a) HI	<u>1</u>	1. Strong Acid											
b) LiOH	<u>3</u>	2. Weak Acid											
c) (CH <sub>3</sub> ) <sub>2</sub> NH	<u>4</u>	3. Strong Base											
d) HCN	<u>2</u>	4. Weak Base											
<p><b>Question 3</b> 6 Points</p>	<p>An aqueous solution has a <b>hydronium ion</b> concentration of <math>1.0 \times 10^{-2}</math> M.</p> <p>a) What is the <b>hydroxide ion</b> concentration in this solution? <u><math>1 \times 10^{-12}</math></u> M</p> <p>b) Is this solution <b>acidic</b>, <b>basic</b> or <b>neutral</b>? <u>Acidic</u></p>												
<p><b>Question 4</b> 6 Points</p>	<p>An aqueous solution has a <b>pOH</b> of <b>8.30</b></p> <p>a) What is the <b>pH</b> of this solution? <u>5.70</u></p> <p>b) What is the <b>hydronium ion</b> concentration in this solution? <u><math>1.99 \times 10^{-6}</math></u> M</p> <p>c) What is the <b>hydroxide ion</b> concentration in this solution? <u><math>5.01 \times 10^{-9}</math></u> M</p>												
<p><b>Question 5</b> 6 Points</p>	<p>Arrange the following solutions in order of <b>increasing acidity</b>:  <b>1 = least acidic ; 3 = most acidic</b></p> <p>a) Solution with a <b>hydroxide ion</b> concentration = <math>1 \times 10^{-10}</math> M <u>3</u></p> <p>b) Solution with a <b>hydronium ion</b> concentration = <math>1 \times 10^{-13}</math> M <u>1</u></p> <p>c) Solution with a <b>pOH</b> = <b>8</b> <u>2</u></p>												
<p><b>Question 6</b> 6 Points</p>	<p>The <b>autoionization</b> of water is an <b>endothermic process</b>: <math>\text{H}_2\text{O}(\text{l}) + \text{H}_2\text{O}(\text{l}) \rightleftharpoons \text{H}_3\text{O}^+ + \text{OH}^-</math>            This means that as we <b>heat water</b>:</p> <table border="0"> <tr> <td>a) The [OH<sup>-</sup>]</td> <td>b) The <b>water becomes</b></td> </tr> <tr> <td><input type="checkbox"/> Decreases</td> <td><input type="checkbox"/> Basic</td> </tr> <tr> <td><input checked="" type="checkbox"/> Increases</td> <td><input type="checkbox"/> Acidic</td> </tr> <tr> <td><input type="checkbox"/> Remains the same</td> <td><input checked="" type="checkbox"/> Remains Neutral</td> </tr> </table>	a) The [OH <sup>-</sup> ]	b) The <b>water becomes</b>	<input type="checkbox"/> Decreases	<input type="checkbox"/> Basic	<input checked="" type="checkbox"/> Increases	<input type="checkbox"/> Acidic	<input type="checkbox"/> Remains the same	<input checked="" type="checkbox"/> Remains Neutral				
a) The [OH <sup>-</sup> ]	b) The <b>water becomes</b>												
<input type="checkbox"/> Decreases	<input type="checkbox"/> Basic												
<input checked="" type="checkbox"/> Increases	<input type="checkbox"/> Acidic												
<input type="checkbox"/> Remains the same	<input checked="" type="checkbox"/> Remains Neutral												

<p><b>Question 7</b> 6 Points</p>	<p>In the following net ionic equation:</p> $\text{CH}_3\text{NH}_2(\text{aq}) + \text{H}_2\text{O}(\text{l}) \rightleftharpoons \text{CH}_3\text{NH}_3^+ + \text{OH}^-$ <p>a) <math>\text{CH}_3\text{NH}_3^+</math> is a Bronsted-Lowry <u>Acid</u></p> <p>b) <math>\text{OH}^-</math> is a Bronsted-Lowry <u>Base</u></p> <p>c) The formula of the <b>reactant</b> that acts as a <b>proton acceptor</b>: <u><math>\text{CH}_3\text{NH}_2</math></u></p>
<p><b>Question 8</b> 6 Points</p>	<p>a) The formula for the <b>conjugate acid</b> of <math>\text{H}_2\text{PO}_4^-</math> is: <u><math>\text{H}_3\text{PO}_4</math></u></p> <p>b) The formula for the <b>conjugate base</b> of <math>\text{H}_2\text{PO}_4^-</math> is: <u><math>\text{HPO}_4^{2-}</math></u></p>
<p><b>Question 9</b> 6 Points</p>	<p>Which of the following aqueous solutions are <b>buffer solutions</b>?</p> <p><input type="checkbox"/> 0.21M HI + 0.17M KI</p> <p><input type="checkbox"/> 0.13M NaOH + 0.24M NaCl</p> <p><input checked="" type="checkbox"/> 0.16M <math>\text{CH}_3\text{COOH}</math> + 0.21M <math>\text{CH}_3\text{COOK}</math></p> <p><input checked="" type="checkbox"/> 0.31M HClO + 0.28M KClO</p> <p><input type="checkbox"/> 0.26M <math>\text{NH}_4\text{NO}_3</math> + 0.37M <math>\text{KNO}_3</math></p>
<p><b>Question 10</b> 8 Points (2 Points)  (4 Points)  (2 Points)</p>	<p>A buffer solution is made that is <b>0.44M</b> in <math>\text{HCN}</math> and <b>0.44M</b> in <math>\text{NaCN}</math></p> <p>a) If <math>K_a</math> for <math>\text{HCN}</math> is <math>4.0 \times 10^{-10}</math>, what is the <b>pH of the buffer solution</b>? <u>9.40</u></p> <p>b) Write the <b>net ionic equation</b> for the reaction that occurs when a <b>small quantity</b> of <math>\text{OH}^-</math> is <b>added</b> to the buffer solution.</p> $\underline{\text{OH}^-} + \underline{\text{HCN}(\text{aq})} = \underline{\text{H}_2\text{O}(\text{l})} + \underline{\text{CN}^-}$ <p>c) The <b>Buffer capacity</b> for removal of <math>\text{H}_3\text{O}^+</math> is: <u>0.44</u> M</p>
<p><b>Question 11</b> 6 Points</p>	<p>A buffer solution is <b>0.398M</b> in <math>\text{H}_2\text{S}</math> and <b>0.324M</b> in <math>\text{NaHS}</math>. If <math>K_a</math> for <math>\text{H}_2\text{S}</math> is <math>1.0 \times 10^{-7}</math>, what is the <b>pH of this buffer solution</b>?</p> <p style="text-align: right;"><small>For full credit you must show work</small></p> $\begin{aligned} \text{pH} &= \text{p}K_a + \log_{10} \frac{[\text{Buffer base}]}{[\text{Buffer acid}]} \\ &= -\log_{10}(1 \times 10^{-7}) + \log_{10} \left( \frac{0.324}{0.398} \right) \\ &= 7.00 + \log_{10}(0.814) \\ &= 7.00 - 0.09 \\ &= 6.91 \end{aligned}$ <p style="text-align: right;">pH = <u>6.91</u></p>

**Question 12**

9 Points

A small amount of **strong base** is added to a **buffer** made from **HCN** and **NaCN**. What changes if any will occur to the following.

Choose from the following choices:

Increase significantly  
Decrease significantly

Increase  
Decrease

Increase slightly  
Decrease slightly

- a) pOH      Decrease slightly
- b) [HCN]      Decrease
- c) [CN<sup>-</sup>]      Increase

**Question 13**

6 Points

Whether or not the process is observed in nature, which of the following could account for the following transformations: (Choose all that apply)

- |  |  |   |
|--|--|---|
| a) $^{234}\text{U} \longrightarrow ^{230}\text{Th}$  | <input checked="" type="checkbox"/> alpha decay      | <input type="checkbox"/> beta decay                   |
|  | <input type="checkbox"/> electron capture            | <input type="checkbox"/> positron emission            |
| b) $^{210}\text{Pb} \longrightarrow ^{210}\text{Bi}$ | <input type="checkbox"/> alpha decay                 | <input checked="" type="checkbox"/> beta decay        |
|  | <input type="checkbox"/> electron capture            | <input type="checkbox"/> positron emission            |
| c) $^{51}\text{Cr} \longrightarrow ^{51}\text{V}$    | <input type="checkbox"/> alpha decay                 | <input type="checkbox"/> beta decay                   |
|  | <input checked="" type="checkbox"/> electron capture | <input checked="" type="checkbox"/> positron emission |

**Question 15**

5 Points

You need to make an aqueous solution of **0.145M iron(II) sulfate** for an experiment in lab, using a **500mL** volumetric flask. How many **grams** of **iron(II) sulfate** should you add?:

*For full credit you must show work.*

$$\text{FeSO}_4 : 55.85 + 32.07 + 4(16.00) = 151.92 \text{ g}\cdot\text{mol}^{-1}$$

$$\# \text{ mol FeSO}_4 = 0.145 (0.500) = 0.0725$$

$$0.0725 \text{ mol FeSO}_4 \left| \begin{array}{l} 151.92 \text{ g} \\ 1 \text{ mol} \end{array} \right. = 11.0 \text{ g}$$

11.0 g

**Question 16**

6 Points

An aqueous solution of **calcium hydroxide** is standardized by titration with a **0.199M** solution of **hydrobromic acid**.

If **21.4mL** of base are required to neutralize **18.9mL** of the acid, what is the **molarity** of the **calcium hydroxide** solution?

*For full credit you must show work and give a balanced chemical equation.*

$$\# \text{ mol HBr} = 0.199 (0.0189) = 3.76 \times 10^{-3}$$

$$3.76 \times 10^{-3} \text{ mol HBr} \left| \frac{1 \text{ Ca(OH)}_2}{2 \text{ HBr}} \right. = 1.88 \times 10^{-3} \text{ mol Ca(OH)}_2$$

$$\text{M} = \frac{1.88 \times 10^{-3}}{0.0214} = 0.0879$$

0.0879 M

**Question 17**

6 Points

According to the following reaction, how many grams of water will be formed upon the complete reaction of **29.0 grams** of **hydrochloric acid** with **excess oxygen gas**?

hydrochloric acid (aq) + oxygen (g)  $\longrightarrow$  water (l) + chlorine (g)

*For full credit you must show work and give a balanced chemical equation.*

$$\text{HCl} : 1.01 + 35.45 = 36.46 \text{ g} \cdot \text{mol}^{-1}$$

$$\text{H}_2\text{O} : 2(1.01) + 16.00 = 18.02 \text{ g} \cdot \text{mol}^{-1}$$

$$29.0 \text{ g HCl} \left| \frac{1 \text{ mol}}{36.46 \text{ g}} \right. = 0.755 \text{ mol HCl}$$

$$0.755 \text{ mol HCl} \left| \frac{2 \text{ H}_2\text{O}}{4 \text{ HCl}} \right. = 0.397 \text{ mol H}_2\text{O}$$

$$0.397 \text{ mol H}_2\text{O} \left| \frac{18.02 \text{ g}}{1 \text{ mol}} \right. = 7.17 \text{ g}$$

7.17 g
