

SID Last KeyFirst Answer

<p>Question 1 7 Points</p>	<p>a) Write a <b>net ionic equation</b> to show that <b>hydrocyanic acid</b>, behaves as an acid in water.  <math>\text{HCN}(\text{aq}) + \text{H}_2\text{O}(\text{l}) \rightleftharpoons \text{H}_3\text{O}^+ + \text{CN}^-</math>            (= or <math>\rightleftharpoons</math>)</p> <p>b) Write a <b>net ionic equation</b> to show how <b>barium hydroxide</b> behaves as a base in water.  <math>\text{Ba}(\text{OH})_2 = \text{Ba}^{2+} + 2\text{OH}^-</math>            (= or <math>\rightleftharpoons</math>)</p>												
<p>Question 2 8 Points</p>	<p>Assign each species on the <b>left</b> to a <b>category</b> on the <b>right</b>.</p> <table border="0"> <tr> <td>a) HF</td> <td><u>2</u></td> <td>1. Strong Acid</td> </tr> <tr> <td>b) Ba(OH)<sub>2</sub></td> <td><u>3</u></td> <td>2. Weak Acid</td> </tr> <tr> <td>c) (CH<sub>3</sub>)<sub>2</sub>NH</td> <td><u>4</u></td> <td>3. Strong Base</td> </tr> <tr> <td>d) HNO<sub>3</sub></td> <td><u>1</u></td> <td>4. Weak Base</td> </tr> </table>	a) HF	<u>2</u>	1. Strong Acid	b) Ba(OH) <sub>2</sub>	<u>3</u>	2. Weak Acid	c) (CH <sub>3</sub> ) <sub>2</sub> NH	<u>4</u>	3. Strong Base	d) HNO <sub>3</sub>	<u>1</u>	4. Weak Base
a) HF	<u>2</u>	1. Strong Acid											
b) Ba(OH) <sub>2</sub>	<u>3</u>	2. Weak Acid											
c) (CH <sub>3</sub> ) <sub>2</sub> NH	<u>4</u>	3. Strong Base											
d) HNO <sub>3</sub>	<u>1</u>	4. Weak Base											
<p>Question 3 6 Points</p>	<p>An aqueous solution has a <b>hydroxide ion</b> concentration of <math>1.0 \times 10^{-2}</math> M.</p> <p>a) What is the <b>hydronium ion</b> concentration in this solution? <u><math>1.0 \times 10^{-12}</math></u> M</p> <p>b) Is this solution <b>acidic, basic or neutral</b>? <u>Basic</u></p>												
<p>Question 4 6 Points</p>	<p>An aqueous solution has a <b>pH</b> of <b>8.30</b></p> <p>a) What is the <b>pOH</b> of this solution? <u>5.70</u></p> <p>b) What is the <b>hydronium ion</b> concentration in this solution? <u><math>5.01 \times 10^{-9}</math></u> M</p> <p>c) What is the <b>hydroxide ion</b> concentration in this solution? <u><math>2.00 \times 10^{-6}</math></u> M</p>												
<p>Question 5 6 Points</p>	<p>Arrange the following solutions in order of <b>increasing acidity</b>:  <b>1 = least acidic ; 3 = most acidic</b></p> <p>a) Solution with a <b>pOH</b> = 8 <u>2</u></p> <p>b) Solution with a <b>hydroxide ion</b> concentration = <math>1 \times 10^{-10}</math> M <u>3</u></p> <p>c) Solution with a <b>hydronium ion</b> concentration = <math>1 \times 10^{-13}</math> M <u>1</u></p>												
<p>Question 6 3 Points</p>	<p><b>Hydrocyanic acid (HCN)</b> has a <math>K_a = 4.0 \times 10^{-10}</math> @ 25°C. Which of the following <b>amino acids</b> has an <b>acid strength</b> closest to that of <b>HCN</b>?</p> <table border="0"> <tr> <td><input type="checkbox"/> Arginine</td> <td>pKa = 12.0</td> <td><input type="checkbox"/> Cysteine</td> <td>pKa = 8.3</td> </tr> <tr> <td><input checked="" type="checkbox"/> Lysine</td> <td>pKa = 9.0</td> <td><input type="checkbox"/> Histidine</td> <td>pKa = 6.1</td> </tr> </table>	<input type="checkbox"/> Arginine	pKa = 12.0	<input type="checkbox"/> Cysteine	pKa = 8.3	<input checked="" type="checkbox"/> Lysine	pKa = 9.0	<input type="checkbox"/> Histidine	pKa = 6.1				
<input type="checkbox"/> Arginine	pKa = 12.0	<input type="checkbox"/> Cysteine	pKa = 8.3										
<input checked="" type="checkbox"/> Lysine	pKa = 9.0	<input type="checkbox"/> Histidine	pKa = 6.1										

<p>Question 7 9 Points</p>	<p>In the following net ionic equation:</p> $\text{CH}_3\text{NH}_2(\text{aq}) + \text{H}_2\text{O}(\text{l}) \rightleftharpoons \text{CH}_3\text{NH}_3^+ + \text{OH}^-$ <p>a) <math>\text{CH}_3\text{NH}_2</math> is a Bronsted-Lowry <u>Base</u></p> <p>b) <math>\text{H}_2\text{O}</math> is a Bronsted-Lowry <u>Acid</u></p> <p>c) The formula of the <b>product</b> that acts as a <b>proton acceptor</b>: <u><math>\text{OH}^-</math></u></p>
<p>Question 8 6 Points</p>	<p>a) The formula for the <b>conjugate acid</b> of <math>\text{HSO}_3^-</math> is: <u><math>\text{H}_2\text{SO}_3</math></u></p> <p>b) The formula for the <b>conjugate base</b> of <math>\text{HSO}_3^-</math> is: <u><math>\text{SO}_3^{2-}</math></u></p>
<p>Question 9 4 Points</p>	<p>Which of the following aqueous solutions are <b>buffer solutions</b>?</p> <p><input type="checkbox"/> 0.21M HI + 0.17M KI</p> <p><input type="checkbox"/> 0.13M NaOH + 0.24M NaCl</p> <p><input checked="" type="checkbox"/> 0.16M <math>\text{CH}_3\text{COOH}</math> + 0.21M <math>\text{CH}_3\text{COOK}</math></p> <p><input checked="" type="checkbox"/> 0.31M HClO + 0.28M KClO</p> <p><input type="checkbox"/> 0.26M <math>\text{NH}_4\text{NO}_3</math> + 0.37M <math>\text{KNO}_3</math></p>
<p>Question 10 8 Points</p>	<p>A buffer solution is made that is <b>0.432M</b> in <math>\text{H}_2\text{S}</math> and <b>0.432M</b> in <math>\text{NaHS}</math></p>
<p>(2 Points)</p>	<p>a) If <math>K_a</math> for <math>\text{H}_2\text{S}</math> is <math>1.0 \times 10^{-7}</math>, what is the <b>pH of the buffer solution</b>? <u>7</u></p>
<p>(4 Points)</p>	<p>b) Write the <b>net ionic equation</b> for the reaction that occurs when <b>0.088mol HBr</b> is added to 1.00 L of the buffer solution.</p> $\underline{\text{H}_3\text{O}^+} + \underline{\text{HS}^-} = \underline{\text{H}_2\text{O}(\text{l})} + \underline{\text{H}_2\text{S}}$
<p>(2 Points)</p>	<p>c) The <b>Buffer capacity</b> for removal of added <math>\text{OH}^-</math> is: <u>0.432</u> M</p>
<p>Question 11 5 Points</p>	<p>A buffer solution is <b>0.398M</b> in <math>\text{HCN}</math> and <b>0.324M</b> in <math>\text{NaCN}</math>. If <math>K_a</math> for <math>\text{HCN}</math> is <math>4.0 \times 10^{-10}</math>, what is the <b>pH of this buffer solution</b>?</p> <p style="text-align: right;"><small>For full credit you must show work</small></p> $\begin{aligned} \text{pH} &= \text{p}K_a + \log_{10} \frac{[\text{CN}^-]}{[\text{HCN}]} \\ &= -\log_{10}(4.0 \times 10^{-10}) + \log_{10} \frac{0.324}{0.398} \\ &= 9.40 + \log_{10}(0.814) \\ &= 9.40 - 0.09 = 9.31 \end{aligned}$ <p style="text-align: right;">pH = <u>9.31</u></p>

<p>Question 12 6 Points (3 Points)  (3 Points)</p>	<p>The pKa value for HNO<sub>2</sub> is 3.35.</p> <p>a) Would a buffer prepared from HNO<sub>2</sub> and KNO<sub>2</sub> with a pH of 3.00 be considered to be an effective buffer? (Yes or No) <u>Yes</u></p> <p>b) A buffer in which the mole ratio of KNO<sub>2</sub> to HNO<sub>2</sub> is 0.46. Would this buffer solution have a greater capacity for added acid (H<sub>3</sub>O<sup>+</sup>) or added base (OH<sup>-</sup>)? <u>OH<sup>-</sup></u></p>																		
<p>Question 13 4 Points</p>	<p>A small amount of <b>strong base</b> is added to a <b>buffer</b> made from HCN and NaCN. What changes if any will occur to the following.</p> <p>Choose from the following choices:</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: center;">Increase significantly</td> <td style="text-align: center;">Increase</td> <td style="text-align: center;">Increase slightly</td> </tr> <tr> <td style="text-align: center;">Decrease significantly</td> <td style="text-align: center;">Decrease</td> <td style="text-align: center;">Decrease slightly</td> </tr> </table> <p>a) pOH <u>Decrease slightly</u></p> <p>b) [HCN] <u>Decrease</u></p>	Increase significantly	Increase	Increase slightly	Decrease significantly	Decrease	Decrease slightly												
Increase significantly	Increase	Increase slightly																	
Decrease significantly	Decrease	Decrease slightly																	
<p>Question 14 6 Points</p>	<p>Whether or not the process is observed in nature, which of the following could account for the following transformations: (Choose all that apply)</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 30%;">a) <sup>234</sup>U → <sup>230</sup>Th</td> <td style="width: 30%;"><input checked="" type="checkbox"/> alpha decay</td> <td style="width: 30%;"><input type="checkbox"/> beta decay</td> </tr> <tr> <td></td> <td><input type="checkbox"/> electron capture</td> <td><input type="checkbox"/> positron emission</td> </tr> <tr> <td>b) <sup>210</sup>Pb → <sup>210</sup>Bi</td> <td><input type="checkbox"/> alpha decay</td> <td><input checked="" type="checkbox"/> beta decay</td> </tr> <tr> <td></td> <td><input type="checkbox"/> electron capture</td> <td><input type="checkbox"/> positron emission</td> </tr> <tr> <td>c) <sup>51</sup>Cr → <sup>51</sup>V</td> <td><input type="checkbox"/> alpha decay</td> <td><input type="checkbox"/> beta decay</td> </tr> <tr> <td></td> <td><input checked="" type="checkbox"/> electron capture</td> <td><input checked="" type="checkbox"/> positron emission</td> </tr> </table>	a) <sup>234</sup> U → <sup>230</sup> Th	<input checked="" type="checkbox"/> alpha decay	<input type="checkbox"/> beta decay		<input type="checkbox"/> electron capture	<input type="checkbox"/> positron emission	b) <sup>210</sup> Pb → <sup>210</sup> Bi	<input type="checkbox"/> alpha decay	<input checked="" type="checkbox"/> beta decay		<input type="checkbox"/> electron capture	<input type="checkbox"/> positron emission	c) <sup>51</sup> Cr → <sup>51</sup> V	<input type="checkbox"/> alpha decay	<input type="checkbox"/> beta decay		<input checked="" type="checkbox"/> electron capture	<input checked="" type="checkbox"/> positron emission
a) <sup>234</sup> U → <sup>230</sup> Th	<input checked="" type="checkbox"/> alpha decay	<input type="checkbox"/> beta decay																	
	<input type="checkbox"/> electron capture	<input type="checkbox"/> positron emission																	
b) <sup>210</sup> Pb → <sup>210</sup> Bi	<input type="checkbox"/> alpha decay	<input checked="" type="checkbox"/> beta decay																	
	<input type="checkbox"/> electron capture	<input type="checkbox"/> positron emission																	
c) <sup>51</sup> Cr → <sup>51</sup> V	<input type="checkbox"/> alpha decay	<input type="checkbox"/> beta decay																	
	<input checked="" type="checkbox"/> electron capture	<input checked="" type="checkbox"/> positron emission																	
<p>Question 15 4 Points</p>	<p>You need to make an aqueous solution of <b>0.145M iron(III) sulfate</b> for an experiment in lab, using a <b>500mL</b> volumetric flask. How many <b>grams</b> of <b>iron(III) sulfate</b> should you add?:</p> <p style="text-align: right;"><i>For full credit you must show work.</i></p> <p style="text-align: center;"><math>Fe_2(SO_4)_3: 2(55.85) + 3(32.07 + 64.00) = 399.91 \text{ g}\cdot\text{mol}^{-1}</math></p> <p style="text-align: center;"><math>\# \text{ mol } Fe_2(SO_4)_3 = 0.145 \times 0.5 = 0.0725</math></p> <p style="text-align: center;"><math>0.0725 \text{ mol } Fe_2(SO_4)_3 \left  \begin{array}{l} 399.91 \text{ g} \\ 1 \text{ mol} \end{array} \right. = 29.0 \text{ g}</math></p> <p style="text-align: right;"><u>29.0</u></p>																		

Question 16  
6 Points

An aqueous solution of **barium hydroxide** is standardized by titration with a **0.199M** solution of **hydrochloric acid**.  
If **21.0mL** of base are required to neutralize **18.9mL** of the acid, what is the **molarity** of the **barium hydroxide** solution?

*For full credit you must show work and give a balanced chemical equation.*

$$\# \text{ mol HCl} = 0.199 \times 0.0189 = 3.76 \times 10^{-3} \text{ mol HCl}$$

$$\frac{3.76 \times 10^{-3} \text{ mol HCl}}{2 \text{ HCl}} \left| \frac{1 \text{ Ba(OH)}_2}{1 \text{ Ba(OH)}_2} \right. = 1.88 \times 10^{-3} \text{ mol Ba(OH)}_2$$

$$M = \frac{1.88 \times 10^{-3}}{0.021} = 0.0896$$

0.0896 M

Question 17  
6 Points

According to the following reaction, how many grams of water will be formed upon the complete reaction of **29.0 grams** of **oxygen gas** with **excess hydrochloric acid**?  
hydrochloric acid (aq) + oxygen (g)  $\rightarrow$  water (l) + chlorine (g)

*For full credit you must show work and give a balanced chemical equation.*

$$\text{O}_2: 2(16.00) = 32.00 \text{ g}\cdot\text{mol}^{-1} \quad \text{H}_2\text{O}: 2(1.01) + 16.00 = 18.02 \text{ g}\cdot\text{mol}^{-1}$$

$$\frac{29.0 \text{ g O}_2}{32.0 \text{ g}} \left| \frac{1 \text{ mol}}{1 \text{ mol}} \right. = 0.906 \text{ mol O}_2$$

$$0.906 \text{ mol O}_2 \left| \frac{2 \text{ H}_2\text{O}}{1 \text{ O}_2} \right. = 1.81 \text{ mol H}_2\text{O}$$

$$1.81 \text{ mol H}_2\text{O} \left| \frac{18.02 \text{ g}}{1 \text{ mol}} \right. = 32.7 \text{ g}$$

32.7 g

*Do Not Write Below This*
