

## 8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

Addition of Strong Acid –  $\text{H}_3\text{O}^+$

1M  $\text{CH}_3\text{CO}_2\text{H}$  / 1M  $\text{CH}_3\text{CO}_2^-$

Weak Acid

Conj. Base

OVERALL CHANGES :

$[\text{CH}_3\text{CO}_2^-]$ : ↓ reacts with the added  $\text{H}_3\text{O}^+$   
 $[\text{CH}_3\text{CO}_2\text{H}]$ : ↑ product of the reaction that removed the  $\text{H}_3\text{O}^+$

$[\text{H}_3\text{O}^+]$ : ↑ not by much, increase due to  $[\text{CH}_3\text{CO}_2\text{H}] \uparrow$   
pH: ↓ not by much,  $[\text{CH}_3\text{CO}_2\text{H}] \uparrow$  cause slight decrease in pH.

## 8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

Addition of Strong Base –  $\text{OH}^-$

1M  $\text{CH}_3\text{CO}_2\text{H}$  / 1M  $\text{CH}_3\text{CO}_2^-$

Weak acid

Conj. base

Buffer acid

Buffer base

OVERALL CHANGES:

$[\text{CH}_3\text{CO}_2\text{H}]$  : ↓  
 $[\text{CH}_3\text{CO}_2^-]$  : ↑  
 $[\text{OH}^-]$  : ↑  
pH : ↑

Reacts with the added  $\text{OH}^-$ .  
Product of the reaction that removed the  $\text{OH}^-$ .  
Not by much. Increase due to  $[\text{CH}_3\text{CO}_2^-]$  ↑.  
Not by much.  $[\text{CH}_3\text{CO}_2^-]$  ↑ causes a slight increase in pH.

## 8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

A buffer solution made from HF and KF has a pH = 2.84.

Addition of OH<sup>-</sup> will cause –

1. Increase significantly\*
2. Increase slightly
3. Decrease significantly\*
4. Decrease slightly
5. Increase
6. Decrease

\* Used only when Buffer breaks down ... more on this later ... not relevant here.

a)  pH ? 2 Adding OH<sup>-</sup> will cause the solution to become a little more basic.

b)  pOH ? 4 If pH increases slightly then pOH will do reverse: pH + pOH = 14

c)  [HF] ? 6 
$$\text{HF(aq)} + \text{OH}^- = \text{H}_2\text{O(l)} + \text{F}^-$$
  
Buffer acid Buffer base

d)   $\frac{[\text{F}^-]}{[\text{HF}]}$  ? 5 See explanation for c): [HF]↓, [F<sup>-</sup>]↑

## 8.10 What Are Buffers? – Making an Optimal Buffer Solution – pH and pKa

Acid  $\text{HCO}_2\text{H}$       Base  $\text{HCO}_2^-$

$[\text{HCO}_2\text{H}]$        $[\text{NaHCO}_2]$

0.10 M      0.10 M

New Target

- $\text{HCO}_2\text{H}/\text{NaHCO}_2$
- $\text{H}_2\text{CO}_3/\text{NaHCO}_3$
- $\text{HOCl}/\text{NaOCl}$
- $\text{H}_3\text{BO}_3/\text{NaH}_2\text{BO}_3$
- $\text{NH}_4\text{Cl}/\text{NH}_3$
- $\text{NaHCO}_3/\text{Na}_2\text{CO}_3$

$K_a = 1.8 \times 10^{-4}$	$\text{p}K_a = 3.74$
$K_a = 4.2 \times 10^{-7}$	$\text{p}K_a = 6.38$
$K_a = 3.5 \times 10^{-8}$	$\text{p}K_a = 7.46$
$K_a = 7.3 \times 10^{-10}$	$\text{p}K_a = 9.14$
$K_a = 5.6 \times 10^{-10}$	$\text{p}K_a = 9.25$
$K_a = 4.8 \times 10^{-11}$	$\text{p}K_a = 10.32$

Preparing Buffer Solutions

pH = 3.74

↳ pH of this buffer

1. See class web site to see whether this holds true for other systems.  
Note: [Buffer acid] = [Buffer base]

When [Buffer acid] = [Buffer base], then the pH of the buffer is equal to the pKa of the Buffer acid.

When choosing a buffer system one usually selects one whose pKa of the weak acid is closest to the desired pH.

## 9.10 What Are Buffers? – Making an Optimal Buffer Solution Adjusting the pH of a Buffer

[HCO<sub>2</sub>H] [NaHCO<sub>2</sub>]

0.10 M 0.10 M

- HCO<sub>2</sub>H/NaHCO<sub>2</sub>
- H<sub>2</sub>CO<sub>3</sub>/NaHCO<sub>3</sub>
- HOCl/NaOCl
- H<sub>3</sub>BO<sub>3</sub>/NaH<sub>2</sub>BO<sub>3</sub>
- NH<sub>4</sub>Cl/NH<sub>3</sub>
- NaHCO<sub>3</sub>/Na<sub>2</sub>CO<sub>3</sub>

New Target

$K_a = 1.8 \times 10^{-4}$	<b>pK<sub>a</sub> = 3.74</b>
$K_a = 4.2 \times 10^{-7}$	pK <sub>a</sub> = 6.38
$K_a = 3.5 \times 10^{-8}$	pK <sub>a</sub> = 7.46
$K_a = 7.3 \times 10^{-10}$	pK <sub>a</sub> = 9.14
$K_a = 5.6 \times 10^{-10}$	pK <sub>a</sub> = 9.25
$K_a = 4.8 \times 10^{-11}$	pK <sub>a</sub> = 10.32

pH = 3.74 ... pK<sub>a</sub> of HCO<sub>2</sub>H ... closest pK<sub>a</sub> to the desired pH.

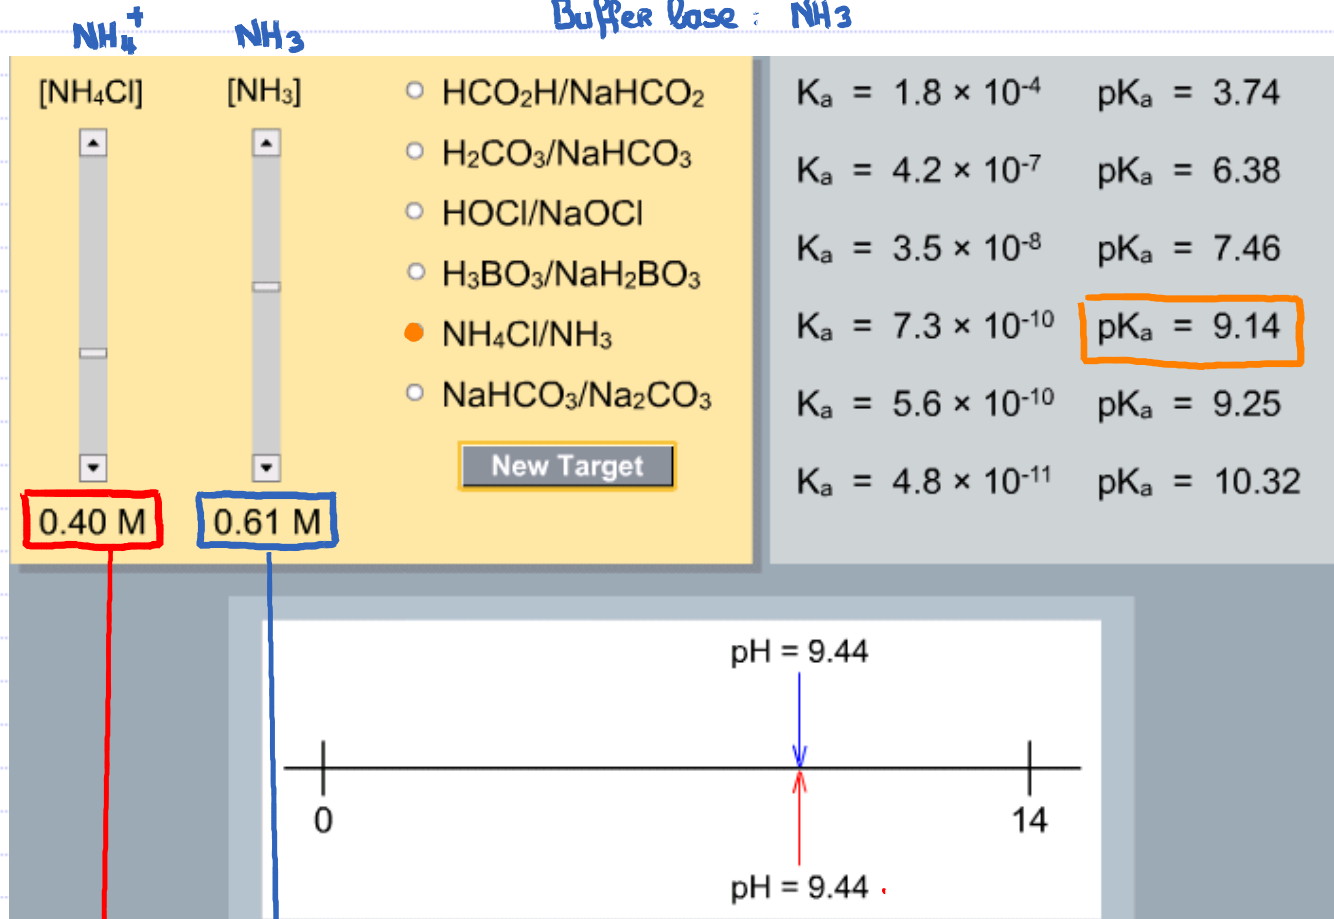

pH = 3.62 Target pH

Since the desired pH is more acidic than the starting pH, either increase the [Buffer acid] or decrease the decrease [Buffer base]

## 8.10 What Are Buffers? – Making an Optimal Buffer Solution

### Buffer Capacity

Buffer acid :  $\text{NH}_4^+$   
Buffer base :  $\text{NH}_3$

Maximum amount of  $\text{H}_3\text{O}^+$  that can be removed } BUFFER CAPACITY  
Maximum amount of  $\text{OH}^-$  that can be removed }

## 8.10 What Are Buffers? – Identifying Buffer Solutions

How many of the following aqueous solutions are buffers? **2**

a) 0.24 M HI + 0.18 M NaI

X: HI is a strong acid.

d) 0.10 M CH<sub>3</sub>COOH + 0.18 M CH<sub>3</sub>COOK

✓: CH<sub>3</sub>COOH (WA) / CH<sub>3</sub>COO<sup>-</sup> its conjugate base.

c) 0.27 M NH<sub>4</sub>Br + 0.31 M NH<sub>3</sub>

✓: NH<sub>4</sub><sup>+</sup> (WA) / NH<sub>3</sub> its conjugate base.

b) 0.34 M NH<sub>4</sub>NO<sub>3</sub> + 0.39 M NaNO<sub>3</sub>

X: NH<sub>4</sub><sup>+</sup> (WA) but NO<sub>3</sub><sup>-</sup> is not its conjugate base.

## 8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

A 1L solution contains 0.25 mol of NaCN and 0.15 mol of HCN.

1. Increase significantly
3. Decrease significantly
5. Increase

2. Increase slightly
4. Decrease slightly
6. Decrease

a) Addition of 0.1 mol of HCl will case the [HCN] to – **5**

b) Addition of 0.1 mol of HCl will case the pOH to – **2**

pH, ↓ slightly.  $\text{pH} + \text{pOH} = 14$  thus pOH ↑ slightly.

c) Addition of 0.1 mol of NaOH will case the [HCN] to – **6**

d) Addition of 0.2 mol of NaOH will case the pH to – **1**

$\text{OH}^- + \text{HCN}$ : Buffer capacity exceeded.

## 8.11 How do We Calculate the pH of a Buffer?

Purely for information purposes only ... the final formula is all you need.

$$[\text{H}_3\text{O}^+] = K_a \left( \frac{[\text{HA}]}{[\text{A}^-]} \right)$$

$$\log_{10} [\text{H}_3\text{O}^+] = \log_{10} K_a + \log_{10} [\text{HA}] - \log_{10} [\text{A}^-]$$

$$-\log_{10} [\text{H}_3\text{O}^+] = -\log_{10} K_a - \log_{10} [\text{HA}] + \log_{10} [\text{A}^-]$$

$$\text{pH} = \text{p}K_a + \log_{10} [\text{A}^-] - \log_{10} [\text{HA}]$$

$$\text{pH} = \text{p}K_a + \log_{10} \left( \frac{[\text{A}^-]}{[\text{HA}]} \right)$$

HA ... Weak acid ... Buffer Acid.

A<sup>-</sup> ... Conj Base ... Buffer Base.

$$\text{BUFFER pH: } \text{pH} = \text{p}K_a + \log_{10} \left( \frac{[\text{BUFFER BASE}]}{[\text{BUFFER ACID}]} \right)$$

Henderson-Hasselbalch Equation.

## 8.11 How do We Calculate the pH of a Buffer?

MAIN QUESTION

Question

A solution contains the following components

0.208 M  $\text{HCO}_2\text{H}$

0.376 M  $\text{NaHCO}_2$

What is the pH of the solution?

$K_a \text{ HCO}_2\text{H} = 1.8 \times 10^{-4}$

Answer

Enter a response, then Submit.

4

Buffer Acid :  $[\text{HCO}_2\text{H}] = 0.208 \text{ M}$   
Buffer Base :  $[\text{HCO}_2^-] = 0.376 \text{ M}$

$$\text{pH} = \text{p}K_a + \log_{10} \left( \frac{[\text{Buffer Base}]}{[\text{Buffer Acid}]} \right)$$

$$\text{pH} = -\log_{10}(1.8 \times 10^{-4}) + \log_{10} \left( \frac{0.376}{0.208} \right)$$

$$\begin{aligned} \text{pH} &= 3.745 + \log_{10}(1.807) \\ &= 3.745 + 0.257 \\ &= 4.002 \end{aligned}$$

## 8.11 Buffers – A Summary

a) BUFFER, Buffer acid + Buffer base | Weak acid + its conjugate base

b) [Buffer acid] = [Buffer base] |  $\text{pH} = \text{pK}_a$

c) Buffer capacity | = [ ] of the Buffer acid OR the Buffer base.

d) How a Buffer works

e) Buffer pH

$$\text{pH} = \text{pK}_a + \log_{10} \left( \frac{[\text{Buffer base}]}{[\text{Buffer acid}]} \right)$$
