8.3 What Are Conjugate Acid-Base Pairs?

ARRHENIUS:

Acid: Produces H_3O^+ in water.

Base: Produces OH^- in water.

BRONSTED LOWRY

Acid: A proton (H^+) donor ...

Base: A proton (H^+) acceptor

? ... Notice anything about $\text{H}_2\text{O(l)}$ in the two examples given above??

8.3 What Are Conjugate Acid-Base Pairs?

Acid* - Conjugate acid
Base* - Conjugate base

HCN/CN⁻ ... Acid/Conjugate base pair
NH₃/NH₄⁺ ... Base/Conjugate acid pair

Acid - H⁺ = its conjugate base
Base + H⁺ = its conjugate acid

Cations behaving as acids?
Anions behaving as bases?

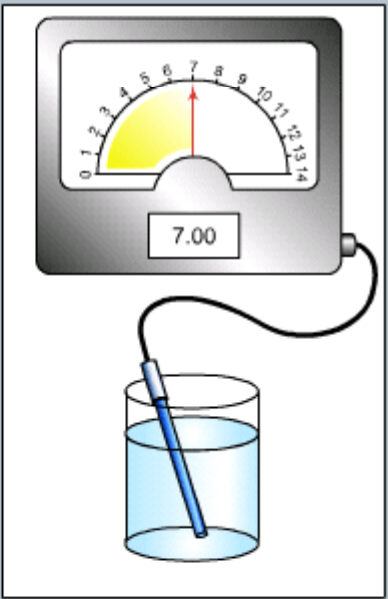

8.3 What Are Conjugate Acid-Base Pairs? – Consequences

Hydrolysis See class web site Description

Cation	Anion
<input type="radio"/> Na ⁺	<input type="radio"/> Cl ⁻ 7.0
<input type="radio"/> NH ₄ ⁺	<input type="radio"/> F ⁻ 7.6
<input type="radio"/> C ₅ H ₅ NH ⁺	<input type="radio"/> CN ⁻ 10.7
	<input type="radio"/> NO ₂ ⁻ 7.7
	<input type="radio"/> ClO ⁻ 9.7

Concentration
0.01 M

Salt: NaCl
pH = 7.00

Base

Conjugate acid

... strong acid

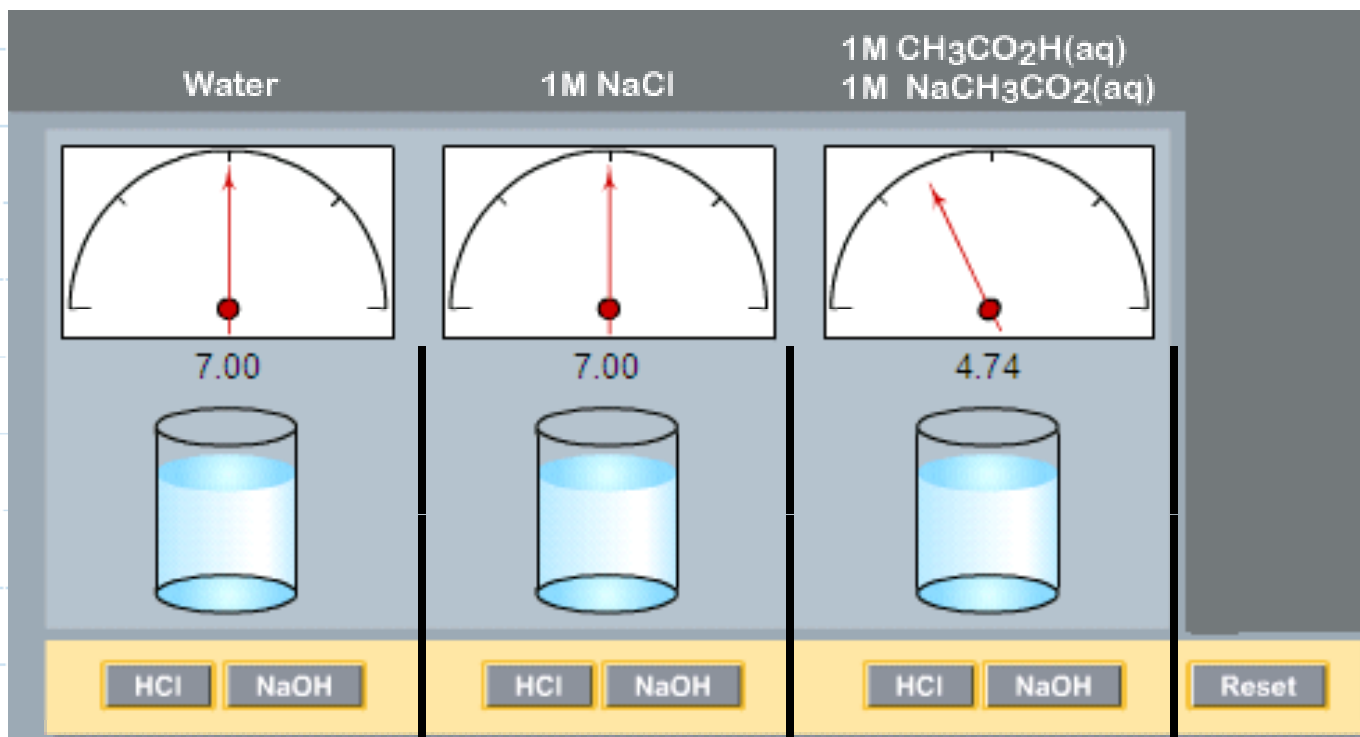

} all weak acids

pH Up ... Sodium carbonate ... Washing Soda

8.10 What Are Buffers?

4.65
4.83

INITIAL
Add H_3O^+
Add OH^-

Large pH change

Small pH change

$\text{CH}_3\text{CO}_2\text{H}$... acid

CH_3CO_2^- ... base ... Conjugate base of $\text{CH}_3\text{CO}_2\text{H}$!

8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

Addition of Strong Acid – H_3O^+

$1\text{M } \underline{\text{CH}_3\text{CO}_2\text{H}} / 1\text{M } \underline{\text{CH}_3\text{CO}_2^-}$
acid conjugate base

H_3O^+ \swarrow SA + WB = 100%

OVERALL CHANGES

$[\text{CH}_3\text{CO}_2^-]$: \downarrow ... Reacted with the added H_3O^+ .

$[\text{CH}_3\text{CO}_2\text{H}]$: \uparrow ... A product of the reaction that removed the H_3O^+ .

$[\text{H}_3\text{O}^+]$: \uparrow ... not by much ... a result of $[\text{CH}_3\text{CO}_2\text{H}] \uparrow$.

pH : \downarrow ... not by much.

8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

Addition of Strong Base – OH⁻

OVERALL CHANGES:

[CH₃CO₂H] : ↓ ... Reacted with the added OH⁻

[CH₃CO₂⁻] : ↑ ... A product of the reaction that removed the OH⁻

[OH⁻] : ↑ ... not by much ... a result of [CH₃CO₂⁻] ↑ ... a base

pH : ↑ ... not by much

8.10 What Are Buffers? – How Do They Resist Drastic pH Changes

A buffer solution made from HF and KF has a pH = 2.84.

Addition of OH⁻ will cause –

1. Increase significantly
2. Increase slightly
3. Decrease significantly
4. Decrease slightly
5. Increase
6. Decrease

- a)  pH ? 2 Adding base ... solution will become MORE basic
- b)  pOH ? 4 [OH⁻] ↑ ... pOH = -log₁₀[OH⁻] will ↓
- c)  [HF] ? 6 HF(aq) + OH⁻ = H₂O(l) + F⁻
- d)  [F⁻]/[HF] ? 5 See (c) ... [HF] ↓, [F⁻] ↑ ... [F⁻]/[HF], ↑
