## What Are Acids and Bases?

**Acid:** A substance that produces  $\text{H}_3\text{O}^+$  ions in aqueous solution.

**Base:** A substance that produces  $\text{OH}^-$  ions in aqueous solution.

## How Do We Use Acid Ionization Constants?

### pKa Versus Ka

$$pK_a = -\log_{10} K_a$$

$$\text{HF : } K_a = 7.4 \times 10^{-4} \quad pK_a = -\log_{10}(7.4 \times 10^{-4}) = 3.13$$

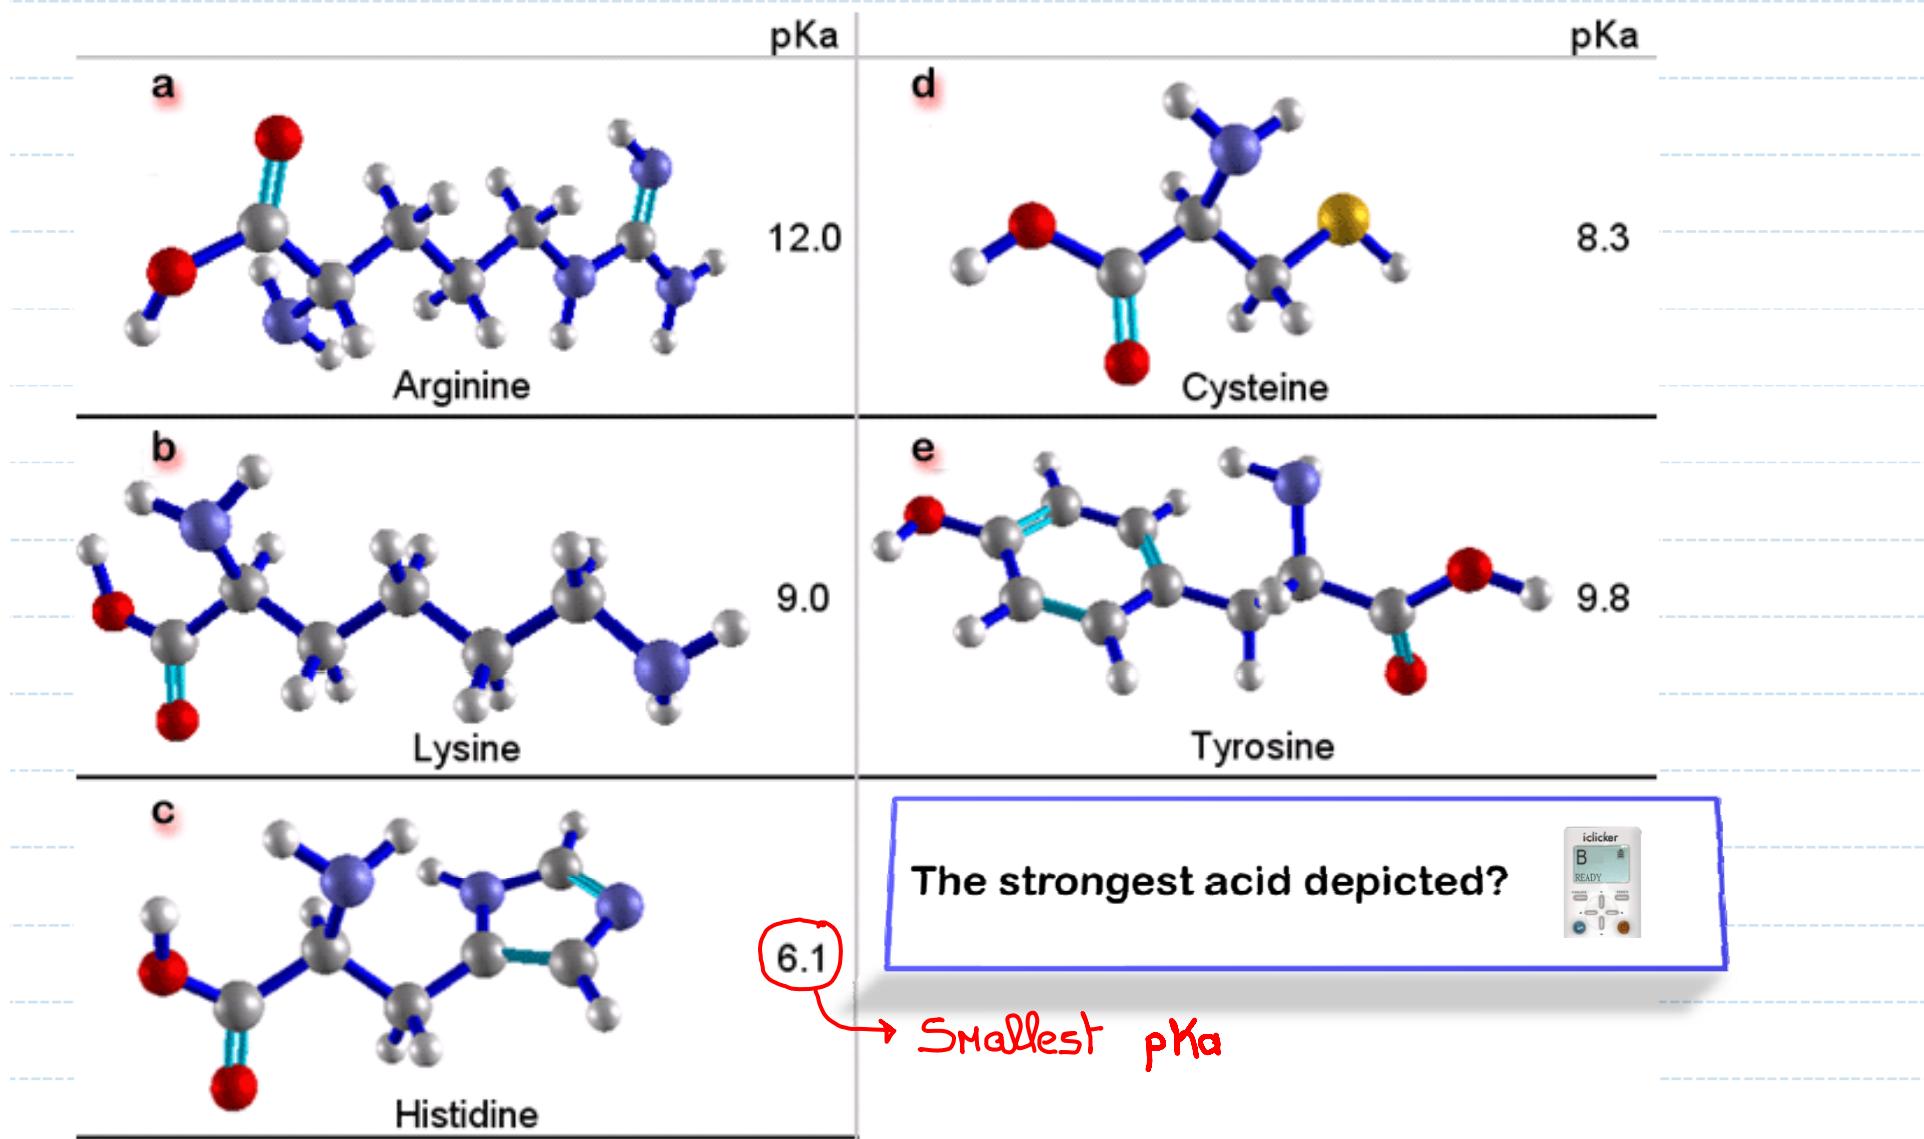

$$\text{HCN : } K_a = 4.0 \times 10^{-10} \quad pK_a = -\log_{10}(4.0 \times 10^{-10}) = 9.38$$

Which is the stronger acid?

- a) The one with the largest  $K_a$  ... HF
- b) The one with the smallest  $pK_a$  ... HF

## Acid Base Properties of Pure Water

### Autoionization of Water

$$K = [\text{H}_3\text{O}^+][\text{OH}^-]$$

$$\hookrightarrow K_w$$

$$@ 25^\circ\text{C}, K_w = 1 \times 10^{-14}$$

$$[\text{H}_3\text{O}^+][\text{OH}^-] = 1 \times 10^{-14}$$

$$[\text{H}_3\text{O}^+] = 1 \times 10^{-7}$$

$$[\text{OH}^-] = 1 \times 10^{-7}$$

**NEUTRAL:**  $[\text{H}_3\text{O}^+] = [\text{OH}^-]$

**ACIDIC:**  $[\text{H}_3\text{O}^+] > [\text{OH}^-]$

**BASIC:**  $[\text{OH}^-] > [\text{H}_3\text{O}^+]$

## Acid Base Properties of Pure Water

### Curiosity!

The autoionization of water is an endothermic process.

Thus as the temperature increases  
then – the  $[\text{H}_3\text{O}^+]$  should –

a) Decrease

b) Increase

c) Remain the same
